This report calculates the difference between the program entry date specified for the client and the date the client's application was entered into the system. For example, if a client's program entry date of "April 4, 2013" was recorded on April 9, 2013, then the report would calculate a 5 day lag time in recording data. The report groups the number of applications by program and has 7 buckets for the number of days an application has been lagging.
