

## Enterprise Holdings Providing Essential Transportation Services As Part of Nationwide Coronavirus Response

Enterprise Holdings – which owns the Enterprise, National and Alamo brands – continues to provide **essential transportation services** through its integrated network of 6,400 car rental locations throughout the United States. For example:

- **Crisis Deployments**: Enterprise plays a key role in meeting the local transportation needs of many state, county and municipal governments as well as first-responders, nonprofits and insurance companies during crises and natural disasters.
- **Supply Chains**: Enterprise provides support to critical business sectors and supply chains – including for grocery and medical items – in thousands of U.S. communities, large and small.
- **Vehicle Replacement**: Enterprise supports drivers who are involved in accidents and immediately require replacement vehicles for themselves and their families.
- **Personal Mobility**: Enterprise supports thousands of American consumers who rely on local car rental for temporary transportation on an as-needed basis, or who simply cannot afford to purchase or maintain a vehicle of their own.
- **Controlled Environment for Private Transport**: When public transportation is inadvisable, Enterprise offers one of the best alternatives for individuals who don't have access to private vehicles. Enterprise employs measures to clean and disinfect the interior of each rental vehicle, including dashboards, instrument panels, steering columns/wheels, accessory panels, center consoles, cup holders, compartments, seats, between console and seats, between doorjamb and seats, and doors and door pockets.

Because of our one-of-a-kind network, Enterprise has the unique ability – as well as a strategic responsibility – to support businesses, government agencies and communities of all sizes for the long term. That means Enterprise, as the largest car rental provider in the U.S., also plays a **key role in our country's infrastructure, making travel and transportation even stronger and more resilient**, especially in times of crisis like these.
