

**Behavioral Health**

## Workstation and System Security Policy

**Effective Date** 10/05/2006  
**Revised Date** 04/06/2021

Veronica Kelley, DSW, LCSW, Director

**Policy** It is the policy of the Department of Behavioral Health (DBH) to ensure standardization of the physical attributes of its information systems and related infrastructure to assure the secure maintenance of confidential and protected health information (PHI), and prevent unauthorized access in accordance with Title 45 Code of Federal Regulations (CFR) §164.310 and §164.312(a)(2)(ii) (Health Insurance Portability and Accountability Act (HIPAA) Security Rules).

**Purpose** To outline the security measures in place to protect workstations and servers in which confidential and PHI is accessed and stored.

**Staff Use of System and Privileges** System users that send, receive, store and access ePHI must comply with the DBH [Computer and Network Appropriate Use Policy](#) which specifies in part:

- Workforce members utilizing DBH systems should have no expectation of privacy, as monitoring of workstations and system access may occur. DBH may log, review, or monitor any data stored or transmitted on its information systems to manage those assets and ensure compliance with County and Department policies, and
- DBH may remove or deactivate any workforce member's privileges, including but not limited to, user access accounts and access to secured areas, when necessary to preserve the integrity, confidentiality and availability of its facilities, user services, and data.

**System Security** All workstations used to access, transmit, receive, or store ePHI (electronic PHI) must comply with the Computer and Network Appropriate Use Policy. If any of the policy requirements are not supported by the workstation operating system or system architecture, one of the following steps must be taken:

- The system must be upgraded to support all security measures;
- An alternative security measure must be implemented and documented, or
- The workstation shall not be used to send, receive, or store ePHI.
